

AccountaBall

The accountability buddy that never gets tired of watching you work.

A macOS floating widget · built with SwiftUI + on-device AI

WHAT WE BUILT

A macOS floating basketball that watches your screen and keeps you honest about your declared tasks.

...and calls you out the moment you drift off.

THE PROBLEM

You lose hours to distraction every day.

- **The drift** — one notification, and 30 focused minutes are gone.
- **The fade** — willpower runs out long before your task list does.
- **The blind spot** — you don't notice you've strayed until the day is gone.

The cost: missed deadlines, 10-hour days for 5 hours of real work.

THE SOLUTION

Active, AI-driven accountability.

Sees what you do

Captures the screen every ~5s and reads it on-device (OCR).

Knows your tasks

An AI infers which declared task you're on — or that you've strayed.

Intervenes live

Drifts off? The ball creeps in, demands an excuse, and judges it.

Fully local — only a small text snippet ever leaves your Mac.

SHOW IT IN ACTION

- 1 Declare** Type 1–5 tasks + context, hit “Let's go!”
- 2 Minimize** Ball shrinks to the screen edge with live timers.
- 3 Drift off** Open Twitter → it creeps in, judgemental: “What are you doing?”
- 4 Be judged** Real reason → approved: “Carry on.” Weak one → “Get back to it.”
- 5 Win** Finish all tasks → 3-point shot, confetti, session summary.

UNDER THE HOOD

Native, local, and fast.

- Interface** SwiftUI + a borderless always-on-top NSPanel
- Capture** ScreenCaptureKit → Vision.framework OCR (offline)
- Intelligence** Claude via API today; on-device Ollama next
- Storage** 100% local — UserDefaults + JSON, no servers

Privacy by design: your screen never leaves the device.

AccountaBall

The accountability buddy that never gets tired of watching you work.

Stay on task. Sink the shot.
